Dear polio eradication supporter,

This month, we celebrated those who lead polio eradication efforts around the world, and took note of the steps that still need to be taken to cross the finish line. On International Women’s Day, we honoured the female vaccinators who dedicate their lives to reaching every last child in their communities. Pakistan, one of the two remaining endemic countries, has demonstrated significant progress toward eradication, and is now working to sustain this momentum and strengthen coordination with Afghanistan. Finally, the international spread of polio remains a global health concern, reflecting the urgent need to overcome the final challenges to achieving a polio-free world.

In this issue:

- Female vaccinators honoured for International Women’s Day
- Innovations for Progress in Pakistan
- Broader benefits of polio eradication in Africa
- Temporary Recommendations Extended for Polio

FEMALE VACCINATORS HONOURED FOR INTERNATIONAL WOMEN’S DAY

On International Women’s Day (8 March), partners honoured the women who go above and beyond to protect their children and communities from polio. One such woman is Binta Kanduwa, the mother of the last child to be paralysed by wild poliovirus in Nigeria. Despite the challenges of bringing up a child with polio, she serves as a powerful advocate to persuade other mothers of the importance of polio vaccination and routine immunisation. We could not have come so far towards eradicating polio without the thousands of women who work all over the world to finish the job. So this International Women’s Day, the Global Polio Eradication Initiative wants to say thank you to them, and all the other vaccinators, community mobilizers, parents, polio survivors, surveillance officers, strategists, politicians and donors, who go above and beyond for children around the world. INNOVATIONS FOR PROGRESS IN PAKISTAN

In a March 2016 letter, the Polio Oversight Board (POB) noted the impressive progress made against polio, particularly in Pakistan. The commitment at all levels of government to high-quality performance and the engagement of political, religious and community leaders are helping to strengthen polio eradication efforts, as well as other health programmes in the country. In Pakistan, the innovative community-protected vaccination strategy has led to a 50% reduction in missed children in recent months. © GPEI

LESS THAN THREE WEEKS TO GO: THE TRIVALENT TO BIVALENT OPV SWITCH

In April, the world will take a critical step closer to eradication through a globally synchronised switch from the trivalent to bivalent oral polio vaccine. This represents the largest and fastest globally synchronised project in the history of vaccines. Watch this series of videos to understand more about the switch.

In the last weeks, the focus is on:
- Distributing shipments of bivalent OPV to service points
- Training monitors to ensure the switch is effectively overseen
- Introducing the inactivated polio vaccine into the remaining countries.

strategy, which uses vaccinators from the communities that most need vaccinations, is key to reaching every last child in high-risk areas. This has been so successful that the programme is being expanded to polio reservoirs in Peshawar-Khyber, Quetta, and Karachi this month. This momentum must be sustained, along with increased cross-border coordination between Pakistan and Afghanistan, in order to interrupt transmission in Pakistan. [Read More]

**BROADER BENEFITS OF POLIO ERADICATION IN AFRICA**

A new **short film** with captivating footage from Ethiopia and Nigeria illustrates how the polio programme infrastructure has helped countries reach more children with lifesaving vaccines and other health services. [Watch here]

**TEMPORARY RECOMMENDATIONS EXTENDED FOR POLIO**

Earlier this month, the Emergency Committee under the International Health Regulations issued a statement commending the strong progress made toward ending polio in recent months, but noting that international spread of polioviruses remains a Public Health Emergency of International Concern. As a result, the Committee’s recommendations for countries with wild poliovirus, as well as those still seeing cases of circulating vaccine-derived poliovirus (cVDPV), were extended for another three months. Additionally, the Committee highlighted the need to tackle the challenges of emergencies and conflict in these final stages of global polio eradication. [Read more]

**PROTECTING PROGRESS IN SUDAN**

Despite its challenging terrain, Sudan maintains a highly sensitive disease surveillance system with real-time epidemiological data. Robust surveillance of acute flaccid paralysis, a major indicator for polio, is a cornerstone of the polio eradication strategy. [Read more]

**FUNDING UPDATES**

- The **United Arab Emirates**, through its Pakistan Assistance Program, provided US$ 7.5 million to WHO for operations costs.
- **Monaco** continues to strongly support the GPEI, not only through co-chairing the Polio Partners Group, but also through its latest grant of €150 000 for polio activities in Niger.
- In February, **Japan** provided US$ 9.2 million to UNICEF for Afghanistan as part of a larger grant for vaccine-preventable diseases. In March, Japan continued its strong support of polio eradication activities in Pakistan with a grant of US$ 3.2 million to UNICEF.
