Tot. in non-end countries	256	19	0	0	0	0	0									
No. of countries (infected)	8	9	2	3	3	1	1									
No. of countries (endemic)	3	3	3 ⁵	3 ⁵	3 ⁵	3	3									

Countries in yellow are endemic. ¹Data in WHO HQ on 07 Feb 2017 for 2017 data and 06 Feb for 2018 data.

²Wild viruses from environmental samples, selected contacts, healthy children and other sources. ³In March 2014, a serotype 1 wild poliovirus was detected in an environment specimen from Brazil, further investigation indicates this is an isolated event without evidence of circulation. ⁴Results are based on L20B positive culture. Prior to reporting week 16, 2014, results were based on a combination of direct qRT-PCR on RNA from concentrated sewage and L20B positive culture. ⁵Between 27 Sep 2015 and 27 Sep 2016, Nigeria was not classified as endemic. NA - Most recent case had onset prior to 1999. ⁶Exceptionally reporting case-contact of a positive index case given the date of collection is later than the onset date of the most recent WPV.

Data in WHO HQ as of 06 Feb. 2018
