

ANNEX 2: COUNTRY AND TERRITORY-SPECIFIC POLIOVIRUS DATA

Facilities are encouraged to use Table 1 of Annex 2, in conjunction with the *Guidance for non-poliovirus facilities to minimize risk of sample collections potentially infectious for polioviruses*, to assess the risk of sample collections potentially infectious for poliovirus.

The data and information shown in Table 1 of Annex 2, sourced from the public domain or reported by countries to WHO, are based on reported presence of virus where virus was detected.

Table 1 of Annex 2 is regularly revised and updated.

WHO makes no warranties regarding the content, completeness or accuracy of the data and information, and shall not be held liable for any damages whatsoever resulting from their use or application.¹

In support of the identification of WPV2/VDPV2 PIM

The following information in Table 1 of Annex 2 can help determine whether a facility has WPV2/cVDPV2 PIM:

1. Year of last detection of WPV2²
2. Period of detection of VDPV2³

Table 1 of Annex 2, column WPV2: The last detection of WPV2 worldwide was in India in October 1999. However, the month and year of the last WPV2 detection has not been accurately recorded for all countries. The table below systematically refers to December as the month of last detection of WPV2 for specimens collected during a specific year and assigns 31 October 1999 as the date of last detection in any country or territory where there was uncertainty surrounding the last reported case of WPV2. Samples collected up to the indicated dates of last detected WPV2 virus presence are considered WPV2 PIM.

Table 1 of Annex 2, column VDPV2: This guidance refers to the date of any first and last detected circulating VDPV2 for each country or territory. Samples collected during the period indicated in the VDPV2 column of Table 1 below are considered VDPV2 PIM.

As indicated in Table 1 of Annex 2, inventories and destruction of unneeded cVDPV2 PIM must be completed after a VDPV2 outbreak is declared closed.

In support of the identification of OPV2/Sabin2 PIM

The following information in Table 1 of Annex 2 can help determine whether a facility has OPV2/Sabin2 PIM:

1. tOPV use in RI
 - a. Year of tOPV introduction⁴
 - b. Month and year of last tOPV use⁵
2. Post-tOPV-cessation SIA using mOPV2 in countries responding to, or at risk of, a PV2 event or outbreak.
 - a. SIA start and end dates

¹ For any comments or questions, please contact containment@who.int.

² Source of virus: Acute flaccid paralysis (AFP), environmental sampling (i.e., wastewater, sewage), enterovirus surveillance or any other source, including contact sampling, healthy children and special studies

³ VDPV: OPV virus strains that are > 1% divergent (or ≥ 10 nucleotide changes for types 1 and 3) or > 0.6% divergent (≥ 6 nucleotide changes for type 2) from the corresponding OPV strain in the complete VP1 genomic region (http://polioeradication.org/wp-content/uploads/2016/09/Reporting-and-Classification-of-VDPVs_Aug2016_EN.pdf).

⁴ The year of tOPV introduction is generally not known. For this reason, the table assumes that materials collected between the listed last WPV2 case and three months after the last use of tOPV, excluding periods with VDPVs, would fall under the category of OPV2/Sabin2 PIMs.

⁵ In countries and territories where only the year is known, the date of last tOPV use was arbitrarily set at 31 December.

Table 1 of Annex 2, column OPV2/Sabin2: In countries showing evidence of continued use of tOPV post-switch, the last date of tOPV use was adjusted to the latest detection. In absence of evidence showing otherwise, samples collected as of three months after the reported last use of tOPV are no longer considered OPV2/Sabin2 PIM.

In absence of evidence showing otherwise, samples collected as of three months after the reported last use of mOPV2 are no longer considered OPV2/Sabin2 PIM.

Countries using mOPV2 are expected to repeat and submit their inventories for OPV2/Sabin2 materials once the use of mOPV2 is discontinued.

This Annex 2 must be read in conjunction with the document *Guidance for non-poliovirus facilities to minimize risk of sample collections potentially infectious for polioviruses*, available [here](#).
