| No. of countries (infected) | 8 9 2 3 3 2 2 |  
| No. of countries (endemic) | 3 3 3⁵ 3⁶ 3⁶ 3 3 |  

### Notes:

1. Data reported to WHO HQ on 03 Oct 2017 for 2017 data and 02 Oct for 2018 data.
2. Wild viruses from environmental samples, selected contacts, healthy children and other sources. ³In March 2014, a serotype 1 wild poliovirus was detected in an environment specimen from Brazil, further investigation indicates this is an isolated event without evidence of circulation. ⁴Results are based on L20B positive culture. Prior to reporting week 16, 2014, results were based on a combination of direct qRT-PCR on RNA from concentrated sewage and L20B positive culture. ⁵Between 27 Sep 2015 and 27 Sep 2016, Nigeria was not classified as endemic. NA - Most recent case had onset prior to 1999. ⁶Exceptionally reporting case-contact of a positive index case given the date of collection is later than the onset date of the most recent WPV.
