Dear polio eradication supporter,

As we near the year’s end, the three remaining endemic countries continue their intense emergency efforts to stop polio. At the heart of these campaigns are the millions of health workers who have gone above and beyond the call of duty to help reach every last child with the polio vaccine. From the vaccinators who helped eliminate polio in India in 2011 to those running immunization campaigns in Afghanistan last month, the programme is grateful for the continuing dedication to ending the disease for good. The promise of a new year will be a good time to renew our efforts and use innovative approaches, with health workers on the ground leading the way.

Polio remains a public health emergency

So close to ending polio for good, it is more important than ever to maintain momentum against the virus. WHO’s emergency committee affirmed this need for urgency last week by announcing that the risk of international spread of poliovirus remains a Public Health Emergency of International Concern (PHEIC). The committee’s experts cited complacency as the biggest risk, and added continuing challenges in Afghanistan and Pakistan and the spread of VDPVs as key factors in their decision. They warned that without strong efforts, polio could return to paralyze 200 000-300 000 children every year. The committee urged donors, partners, and affected countries to marshal even greater political and financial will to finish polio once and for all. Read more about this important decision. [More]

Commission proposes updated process for certifying polio eradication

What does it mean to truly “end polio”? The Global Commission for the Certification of Poliomyelitis Eradication (GCC) met last month to answer that question and propose an updated process for how to certify the world polio-free. From wild poliovirus to VDPVs, learn more about the proposed steps to declare an end to all polioviruses and the suffering and paralysis they cause. [More]
