

Sustaining the Gains with Essential Immunization

Dr. Katherine O'Brien, Director, Department of Immunization, Vaccines and Biologicals (IVB), WHO

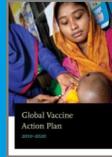

Polio Partners Group Meeting | Geneva | 7 June 2019

Outline

- Immunization Agenda 2030

Strengthening Immunization and VPD Surveillance to reach and sustain polio eradication

With GVAP coming to an end in 2020

New vision and strategy for vaccines and immunization is needed

To set a compelling, country-centric vision for the next decade that engages and aligns stakeholders – immunization and beyond – at all levels

To address emerging issues, and harness **new solutions** for V&I

To re-ignite importance of V&I for broader health & development agendas

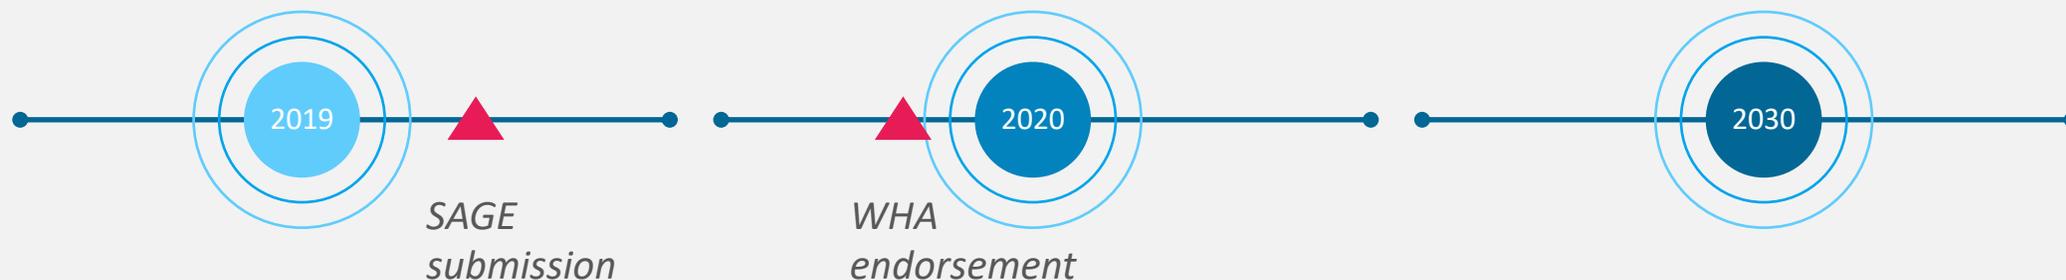

Immunization Agenda 2030

Immunization Today and in the next Decade
Developing together the vision and strategy for immunization 2021-2030

Draft Zero for Co-creation by **14 June 2019**

Draft zero for the vision and strategic framework was shared for co-creation on 15 May

Vision and Strategic Framework are the first components towards the next decade

"Immunization Agenda 2030"

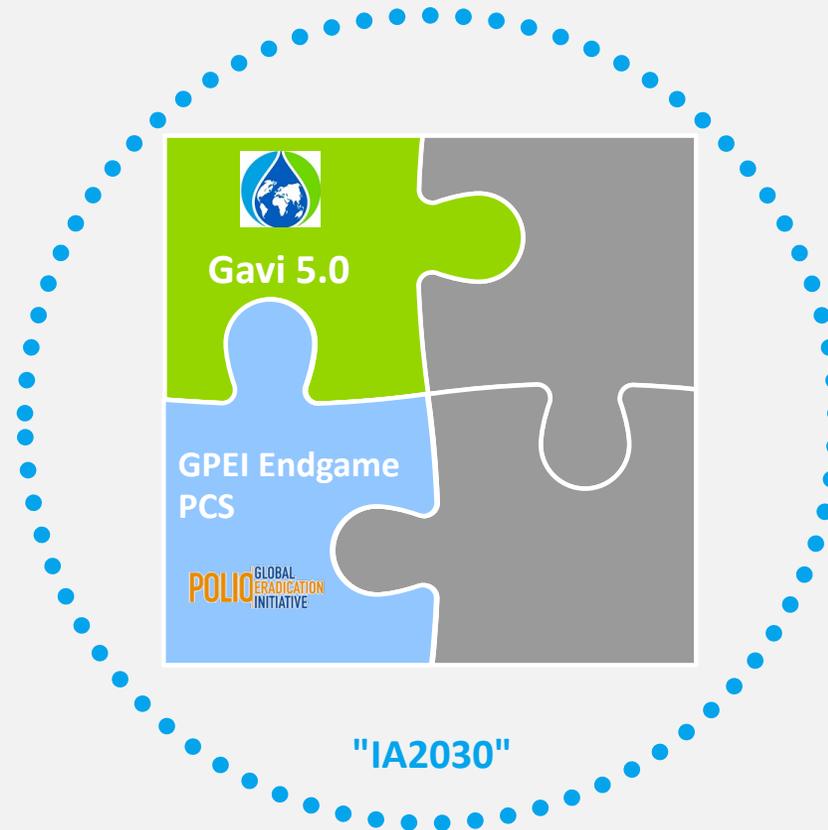

"IA2030" will be closely aligned with Gavi 5.0 and Polio Strategies

Gavi 5.0

- Focusing on specific countries, vaccines, 2021-2025 period
- 'Actioning' specific interventions: market shaping, delivery, demand
- Addressing the Gavi Board priorities

Polio Endgame / Post Certification Strategy

- Focusing on achieving and sustaining polio eradication
- Identifying polio-specific interventions (IPV coverage, AFP surveillance, detecting and responding to polio outbreaks)
- Aligning GPEI partners and "future owners"

"IA2030"

- Covering all countries, vaccines and areas for intervention, for 2021-2030
- Providing new worldwide vision and strategy
- Aligning all stakeholders (in health & beyond) interested in immunization, at global/ regional/ local levels

Building on lessons learned from GVAP, "IA2030" brings new emphasis on five concepts for the next decade

Linking to
larger PHC and
UHC agendas

Expanding to
other age
groups along
the life-course

Better use of
subnational
data

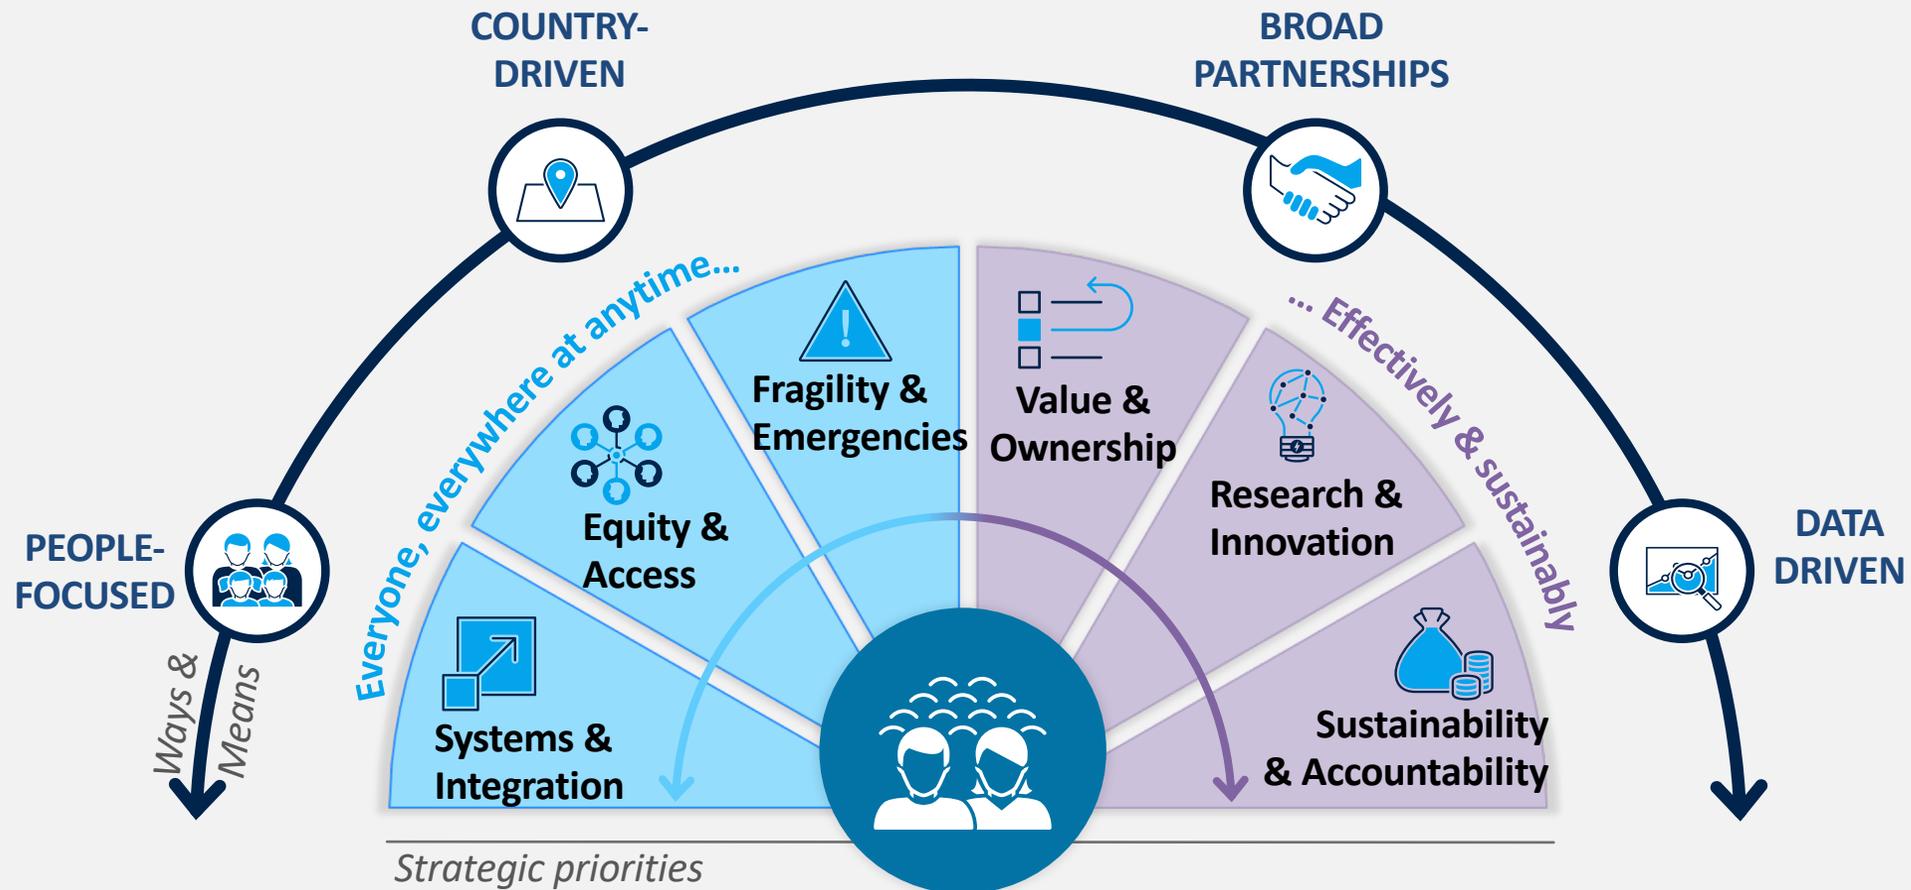

Country-driven
and tailored
approaches

People &
communities at
the center of
everything

A new strategic framework driven by six interlinked strategic priorities, and four ways and means

All strategic priorities are relevant for reaching and sustaining polio eradication

Systems & integration

Sustaining and building upon **polio core capacities** in high priority countries, including VPD surveillance

Everyone, everywhere at anytime...

Equity & access

Building on polio best practices and lessons-learned to **reach every last child**

Fragility & Emergencies

Delivering **polio vaccines** and sustaining **community based surveillance in acute and chronic emergencies** and minimizing risk of outbreaks

Value & Ownership

Ensuring and sustaining **high level commitment to achieve eradication and to keep the world polio free**

... Effectively & sustainably

Research & innovation

Accelerating **polio-related research** (e.g. nOPV) and building upon the polio innovations (delivery and programmatic innovations)

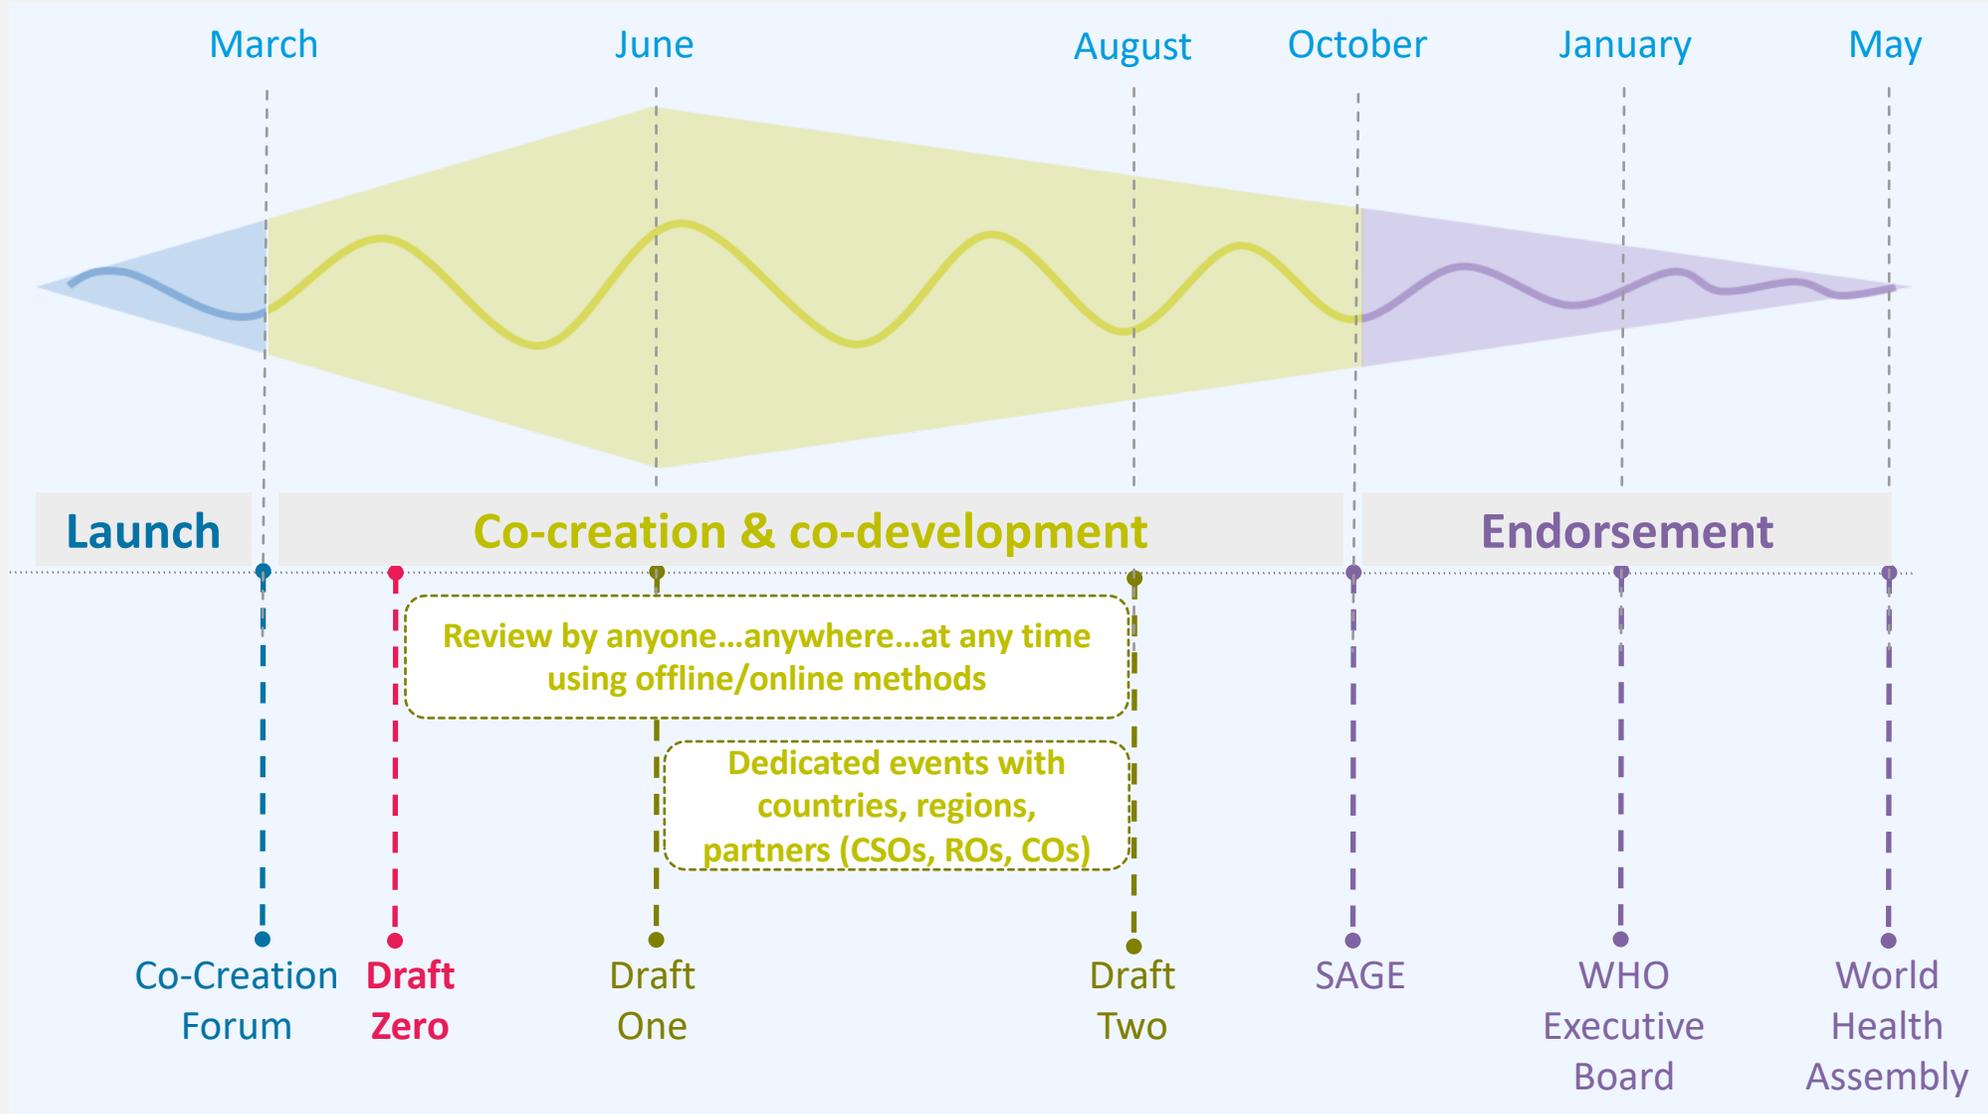

Sustainability & Accountability

Ensuring a **reliable global supply of IPV** containing vaccines, OPV stockpiles; ensure a successful pathway for countries to **transition out of GPEI** support

The way towards WHA endorsement

Outline

Immunization Agenda 2030

- Strengthening Immunization and VPD Surveillance to reach and sustain polio eradication

Strengthening Immunization and VPD Surveillance

Polio Endgame Strategy 2019-23

Challenge:

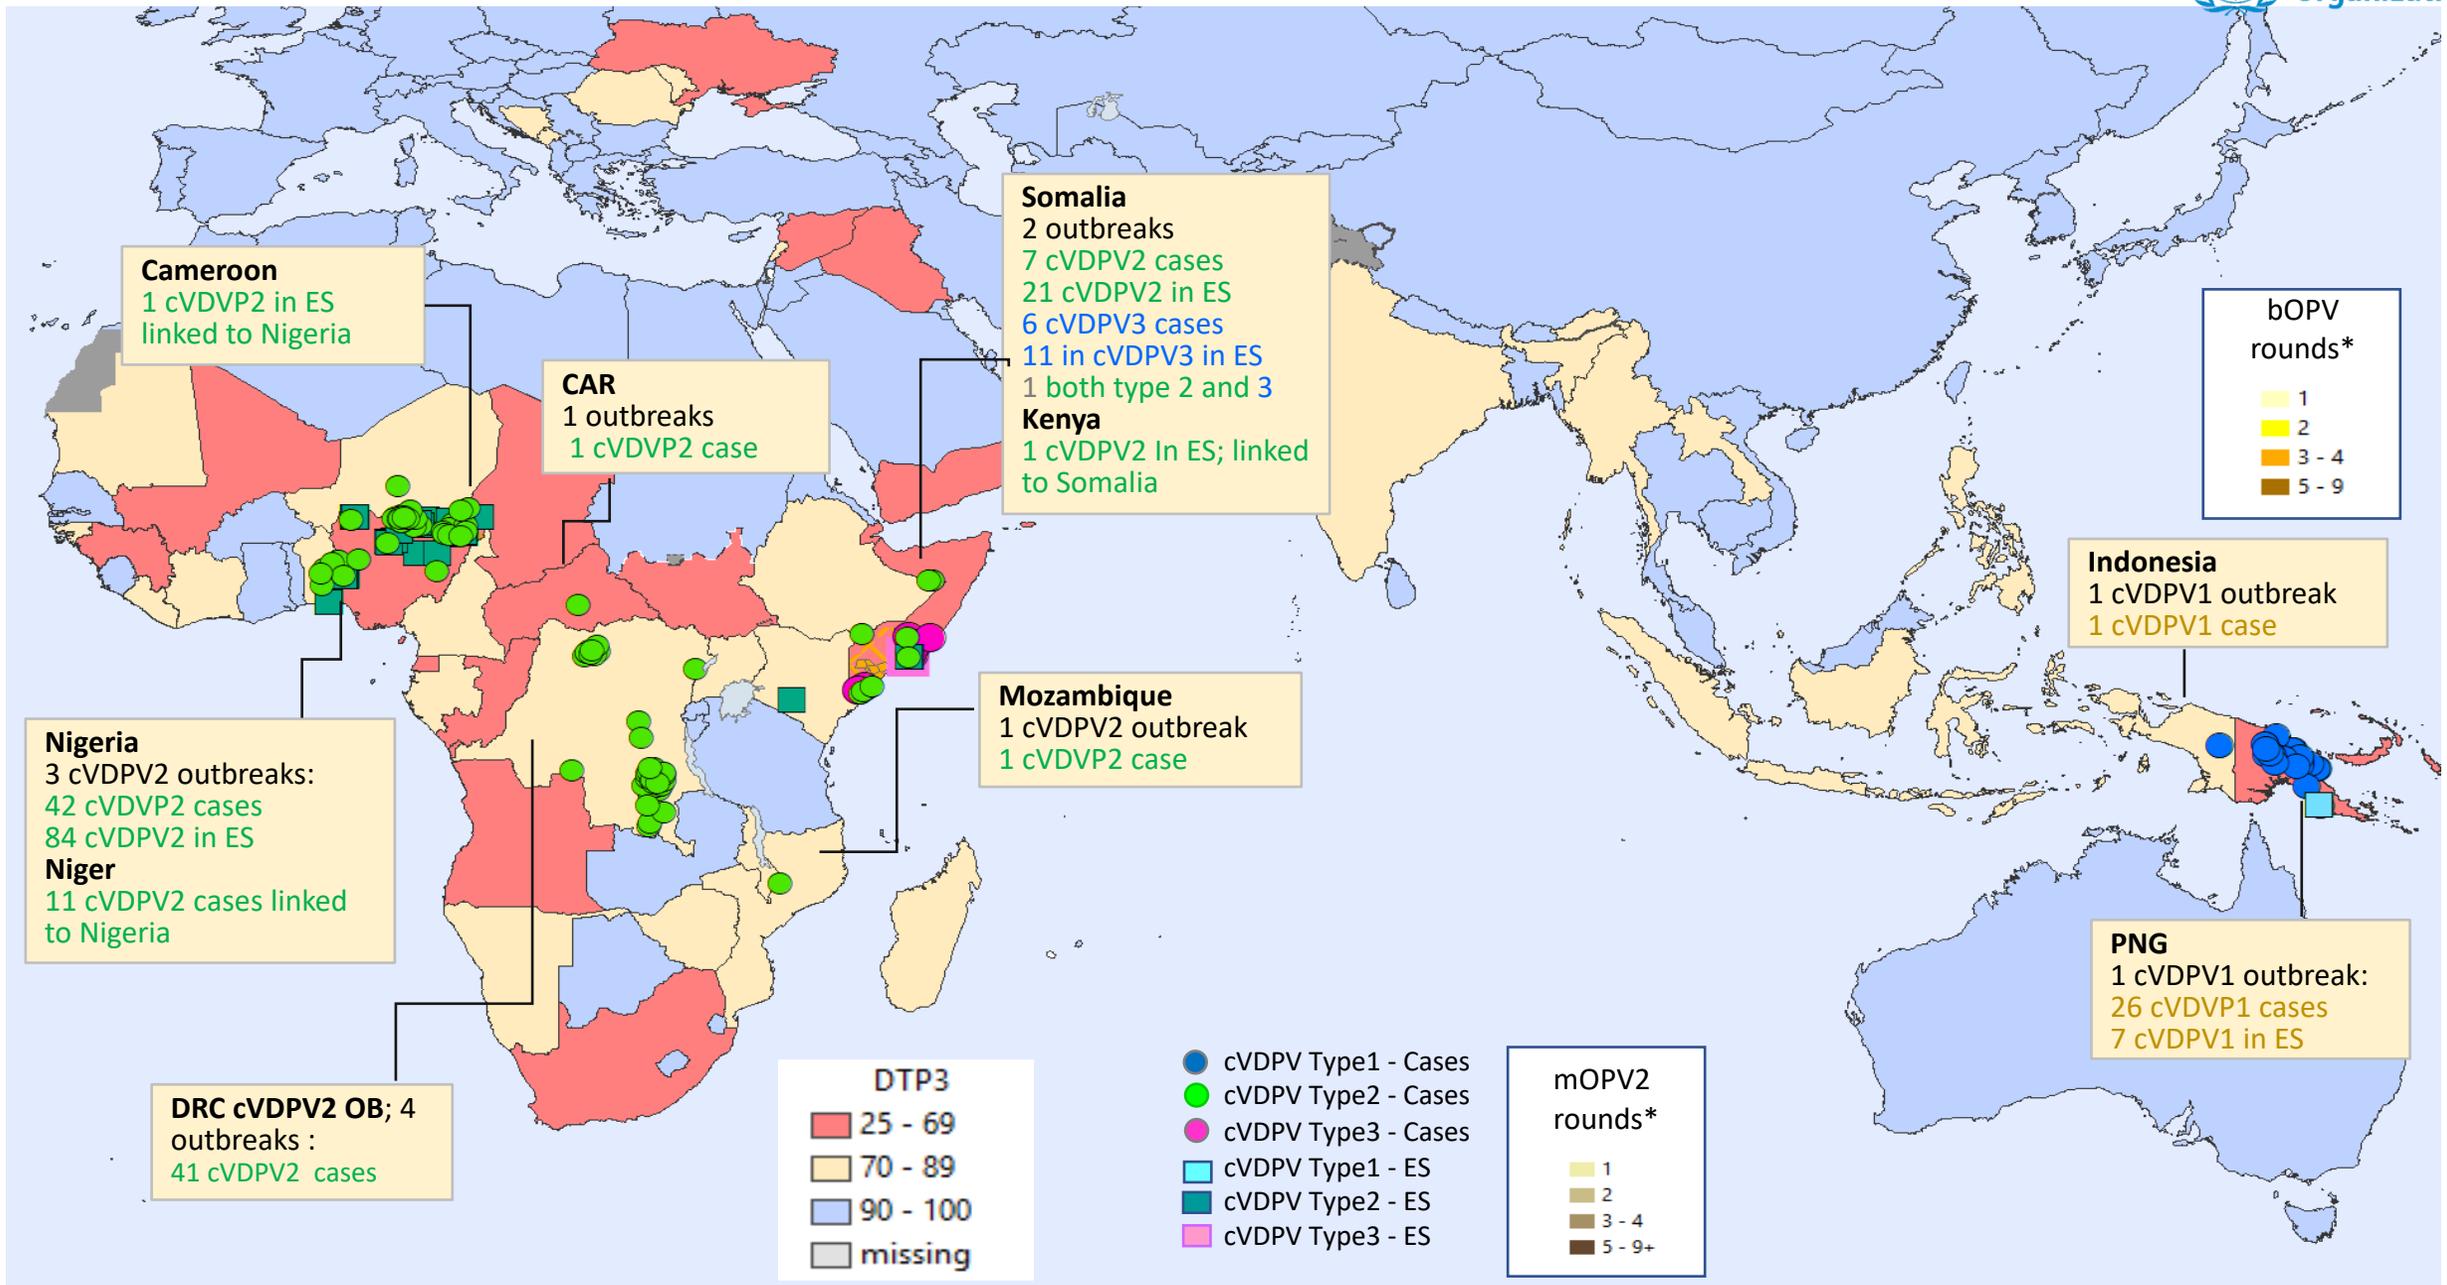

Sustaining eradication in countries with weak or fragile health systems

Solutions:

Improve immunization coverage and strengthen the health system by:

- ✓ supporting the EPI programme where GPEI has the largest footprint
- ✓ Focusing on lowest performing districts
- ✓ Pursuing synergies and cost-saving efficiencies between polio SIAs and other immunization campaigns
- ✓ Engaging CSOs to reach out to communities
- ✓ Engaging strategically in country health sector planning processes
- ✓ Capitalizing on synergies with complementary initiatives

Immunization coverage in countries with current cVDPV Outbreaks (WUNEIC 2017),

*from 1 Jan 2017 to 31 Aug 2019

Strengthening Immunization and VPD Surveillance

Polio Endgame Strategy 2019-23

Challenge:

Ensuring polio surveillance sensitivity while integrating it within VPD/communicable disease surveillance

Solutions:

Ensure polio virus sensitivity and further integration by:

- ✓ Implement an appropriate mix of surveillance strategies to achieve and sustain certification standards within the framework of VPD/communicable disease surveillance,
- ✓ Expand environmental surveillance and integrate with other epidemic-prone pathogens,
- ✓ Maintain lab capacity and where feasible integrate with other disease platforms,
- ✓ Increase efficiency of POLIS, and ensure interoperability with WIISE

Integrating polio to VPD surveillance - “One size does not fit all”

Expansion of WHO AFRO Disease Surveillance (1997-2014)

DISEASES	1997-99	2000-2002	2003-2005	2006-2014
AFP	Light Blue	Light Blue	Light Blue	Light Blue
Measles	White	Light Blue	Light Blue	Light Blue
Neonatal tetanus	White	Light Blue	Light Blue	Light Blue
Yellow Fever	White	White	Dark Blue	Dark Blue
Cholera	White	White	Dark Blue	Dark Blue
Cerebral spinal meningitis	White	White	Dark Blue	Dark Blue
Bloody diarrhea	White	White	White	Dark Blue
Rabies / animal bite	White	White	White	Dark Blue

- Polio funded surveillance medical officers do more than AFP surveillance
- There is potential to increase the efficiency of using polio surveillance resources

Integrating polio to VPD surveillance - “One size does not fit all”

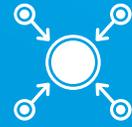

- **“Responsible integration”** - WHO is defining parameters to integrate polio to VPD surveillance in targeted countries
- Surveillance system **must adapt to country needs** (technical capacity, disease burden, demographic profile, disease-specific risk)
- WHO is developing a **comprehensive VPD surveillance strategy (with costing)**

Table 2 – Tier classification of countries

		Disease-specific risk (polio)			
		Very high	High	Medium	Low
Country-specific fundamentals* (Composite index)	Very low	Tier 1	Tier 1	Tier 2	Tier 2
	Low	Tier 1	Tier 2	Tier 3	Tier 3
	Medium	Tier 2	Tier 3	Tier 3	Tier 4
	High	Tier 4	Tier 4	Tier 4	Tier 4

Table 1 – Country specific elements

	Country capacity	Disease burden	Demographic profile
Stage 1	Limited capacity; relies heavily on external funding for basic health services	Communicable diseases	Very high fertility rate, very short life expectancy
Stage 2	Some technical capacity, but relies on external funding for basic health services	Communicable diseases with evidence of nascent epidemiological transition	High fertility rate, short life expectancy
Stage 3	Strong technical capacity, with minimal reliance on external funding for health	Non-communicable diseases and communicable diseases	Low fertility rate, high life expectancy
Stage 4	Advanced technical capacity, no reliance on external funding for health	Non-communicable diseases	Very low fertility rate, very high life expectancy

VDP surveillance relies heavily on GPEI funding...we need to allocate more resources to surveillance as GPEI ramps down

We cannot eradicate polio without strong immunization systems

As we move toward certification, integration will be increasingly critical

Our strategies for the new decade should focus on reaching eradication...and ensure its sustainability

Appendix – Background slides

The Decade of Vaccines has achieved significant progress for immunization

- 117M** Infants received DTP3 in 2017, the most ever
- 4.6M** Additional infants vaccinated in 2017 (vs. 2010)
- 1.8M** Fewer children under-vaccinated in 2017 (vs. 2010)
- 3** Additional countries achieved MNTE in 2017¹
- 113** Countries introduced new vaccines since 2010
- +140%** Increase in number of NITAGs since 2010

1. Ethiopia, Haiti and the Philippines. Source: 2018 assessment report of the GVAP (WHO)

...yet, most goals set 10 years ago will not be achieved by 2020

3 Countries¹ still polio-endemic

~85% MCV1 coverage stagnation, below 90%+ target between 2010 & 2017

No Region sustains measles elimination

< 30% Countries with DTP3 coverage at 90% national; 80% district

1 Rubella-free region in 2018

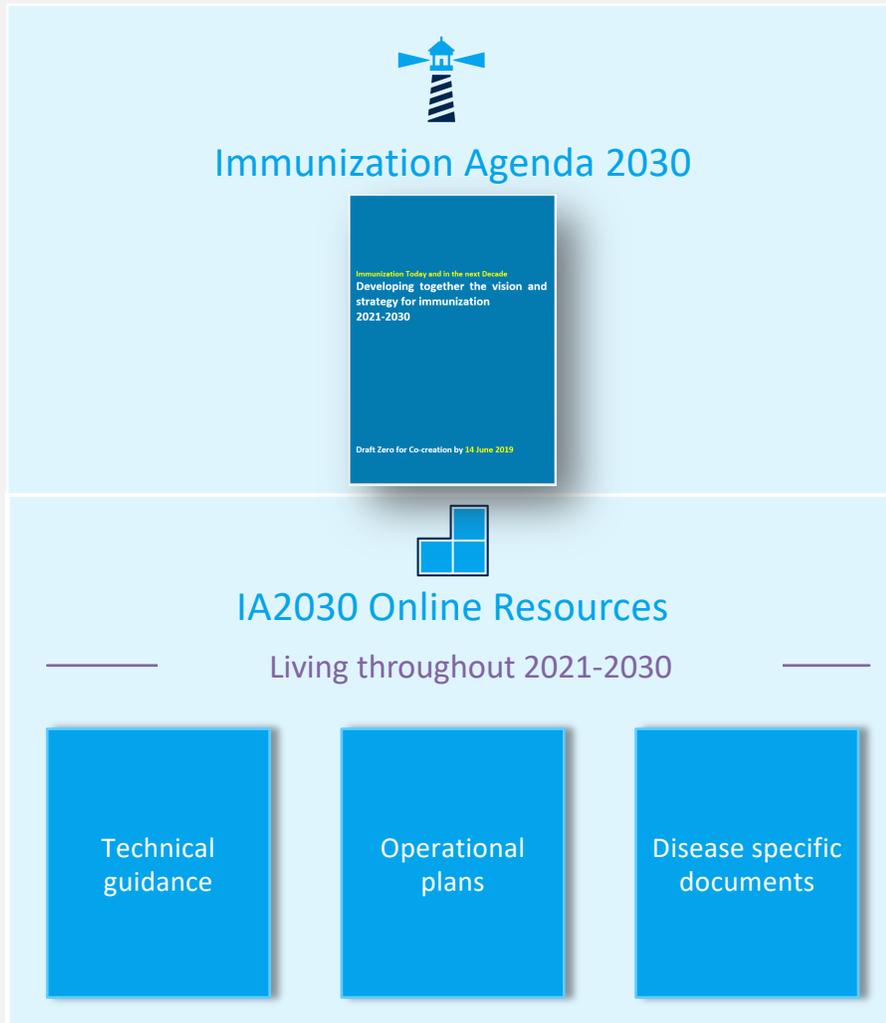

19M+ Children still under-vaccinated

14 Countries² yet to achieve MNTE

25 LICs & MICs without new vaccines introductions between 2010 & 2016

"Immunization Agenda 2030" will include two components

"Draft Zero"

Immunization Agenda 2030 Vision & Strategic framework

Vision (1-2 page document, for everybody)

- Vision 2030 and beyond – to inspire and rally
- Values & high-level strategic priorities

Strategic framework (15-20 page document, for immunization community & wider stakeholders)

- Strategic priorities, ways and means to guide development of global, regional, national strategies and plans

Documents to be endorsed at WHA 2020

IA2030 Online Resources

- Technical guidance documents "living" throughout 2021-30
- Existing or new global, regional, country plans & goals (e.g., regional strategies)
- Existing or new disease- and topic-specific technical guidance and best-practice documents (e.g., Measles strategy)

"Living" throughout the decade

Draft Zero document is structured in two main sections

Vision

3 pages

Strategic Framework

Introduction

Create a sense of need and urgency for a new vision and strategy for immunization

The path forward

Provide an overview implementing strategic framework through actions at global, regional and country levels

Goals and targets

Describe the approach to defining immunization goals and targets for the next decade

Ways and means

Showcase how should immunization efforts and investments be done differently in the next decade

Case for immunization

Showcase importance of immunization within and beyond health

Changing context & emerging challenges

Provide lessons learnt from the past decade and GVAP and highlight emerging challenges for the next decade

Strategic priorities

Propose a set of strategic priorities to achieve the new vision, their overall objective, and main focus areas

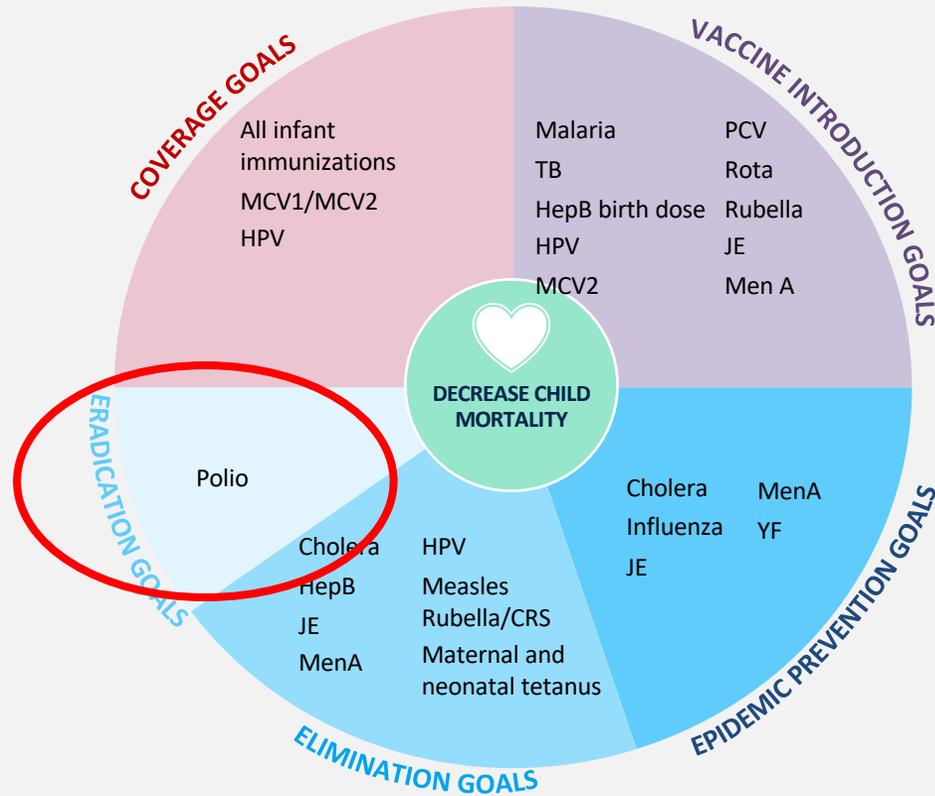

19 pages

"IA2030" will encompass both existing targets and new goals

Existing disease specific regional and global Goals

New goals

Existing goals

31 May, 07 June and 14 June

Integration: Combined bOPV/MCV SIAs

- **Priority** - non polio endemic, non-outbreak countries, with high performance in previous MCV SIAs (Admin $\geq 90\%$)
- **Upon country request** (e.g. PNG, DRC, even if outbreak countries)
- **Implemented in 7 countries** (Nepal, Myanmar, Uganda, Sierra Leone, Sudan, PNG, DRC)

Potential to reach more children, with less cost:

- Uganda – 8.5 million children vaccinated, \$4M cost savings
- Sudan – 8.1 million children vaccinated, \$1.85M cost savings
- Sierra Leone – 1.6 million children vaccinated, \$350,000 cost savings

What is comprehensive VPD surveillance?

Country, regional & global systems required to meet the **minimal recommended standards** for surveillance of a **comprehensive** set of **priority** VPDs, with integration of surveillance functions across other diseases where possible

Includes?

- **More VPDs**, based on country priorities
- For most diseases, **individual-level data & lab-confirmation**

Design?

- Based on VPD surveillance **objectives**
- **Mix** of nationwide case-based, aggregate & sentinel surveillance

Strategy?

- **Integration/ adaption** of existing systems where possible
- Common **support functions & funding**

Use?

- Essential for EPI **decision-making & response**
- Program monitoring, emphasis on **data visualization**
