Countries in yellow are endemic ¹Data in WHO HQ on 24 Feb 2015 for 2015 data and 23 Feb 2016 for 2016 data.

²Wild viruses from environmental samples, contacts & other sources. ³In March 2014, a serotype 1 wild poliovirus was detected in an environment specimen from Brazil, further investigation indicates this is an isolated event without evidence of circulation. ⁴Results are based on L20B positive culture. Prior to reporting week 16, 2014, results were based on a combination of direct qRT-PCR on RNA from concentrated sewage and L20B positive culture. ⁵The 2010 total includes cases with inadequate specimens that were exceptionally classified as confirmed polio based on their association with the WPV1 outbreak. ⁶Includes 1 case in 2012 with a mixture of W1W3 virus. ⁷As of 27 Sep 2015, Nigeria no longer classified as endemic. NA - Most recent case had onset prior to 1999.

Data in WHO HQ as of 23 February 2016
