Total wild virus type 1	359	74	37	22	33	11	42									
Total wild virus type 3	0	0	0	0	0	0	0									
Tot. in endemic countries	340	74	37	22	33	11	42									
Tot. in non-end countries	19	0	0	0	0	0	0									
No. of countries (infected)	9	2	3	2	2	1	0									
No. of countries (endemic)	3	2 ⁵	2 ⁵	3	3	1	0									

Countries in yellow are endemic. ¹Data reported to WHO HQ on 03 July 2018 for 2018 data and 02 July 2019 for 2019 data.

²Wild viruses from environmental samples, selected contacts, healthy children and other sources. Last WPV type 3 had its onset on 10 November 2012. ³In March 2014, a serotype 1 wild poliovirus was detected in an environment specimen from Brazil, further investigation indicates this is an isolated event without evidence of circulation. ⁴Results are based on L20B positive culture. Prior to reporting week 16, 2014, results were based on a combination of direct qRT-PCR on RNA from concentrated sewage and L20B positive culture.

⁵Between 27 Sep 2015 and 27 Sep 2016, Nigeria was not classified as endemic. NA - Most recent case had onset prior to 1999. ⁶Exceptionally reporting case-contact of a positive index case given the date of collection is later than the onset date of the most recent WPV.
